Section View of our Telescopic Sight: Details are Important

These are the essential optical components: eyepiece, reversal lens system, reticle/focal plane of objective lens, and objective lens.

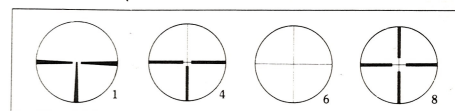

The ultimate scopes for hunting-target, silhouette or varmint shooting. Rugged steel construction, excellent optics, and precise click adjustments meet the requirements of the serious shooter. A five step process assures a durable, corrosion resistant finish. The scopes are subjected to vibration tests, exceeding the demands of the most powerful cartridges, as well as environmental tests, ranging from -40 F to +122 F, and rain testing. High precision seals resistant to oil, light and aging are used to prevent fogging. High quality optics begin with the best available raw glass which is polished to very close tolerances by highly skilled craftsmen. Lenses are then coated with an anti-reflective coating which is formulated for maximum light transmission. This makes the scopes brighter, even in poor lighting. A unique reticle control indicator always keeps you aware as to how much adjustment you have left and also makes it simpler to center your scope. Available in fixed-power or variable power models, and with choice of reticle (see chart at right). Recommended for hunting are reticles number 6 and 8 as they are the best compromise for most hunting conditions. Reticle number one is tapered so as to cover less of the target. Comes complete with clear view lens caps.

Pistols

Founded in 1949, Heckler & Koch are leaders in high-technology weapons, and are among the finest gun designers and manufacturers in Europe. A large part of HK's splendid reputation is due to the exclusive DRLB (delayed roller-locked bolt) system – the same technology that gives their HK hunting and sporting rifles their unexcelled reliability and precision.

P7 SERIES Semi-Auto Pistols 9 mm Para.

A revolution in handgun technology: HKP7 can be drawn, cocked and fired in one continuous motion, simply by squeezing the handgrip and pulling the trigger. No hammer to pull back, no separate safety to fumble with. Nor will it fire if accidentally dropped or bumped, even with a round in the chamber. Smooth acting with no external moving parts, it stays on target from first round to last. Novel 3-dot sighting system works fast even in poor light. Feature an ambidextrous magazine release behind the trigger guard, developed for the New Jersey State Police.

Ingenious new design features (one-piece lower receiver, rotary head) have been incorporated, without in any way affecting the inertia operation of the Benelli system. Models are available in the varichoke or magnum versions. A special easy to use cut off device enables the cartridge in the chamber to be replaced rapidly with another from the magazine; a red disc visible on the cut-off lever indicates that the hammer is cocked. A shim kit enables the drop of the stock to be altered up to 50 or 60 mm (2 1/2") with the greatest of ease, with no need for manual or mechanical modifications to the wood. The lower receiver is made of special ergal alloy, black finished. The nickel-chrome-molybdenum steel barrel is chrome-plated. NEW! Siberian Survivors

Originally designed for the Soviet AKM, these short, stocky bayonets make ideal knives for the Canadian hunter or outdoorsman. The 150mm (6") Bowie-type blade of hardened steel carries a razor sharp hollow-ground edge, right up the curve to the tapered point. Heavy plastic pommel for a comfortable grip, with short leather lanyard for additional security. A lug on the black metal scabbard fits a hole in the blade, to make an effective wire cutter. A leather strap secures the knife in its scabbard. 325mm (13") overall length.
